Assignment 1
Bar chart

PURPOSE:

A Bar Chart is used to compare different categories using rectangular bars.

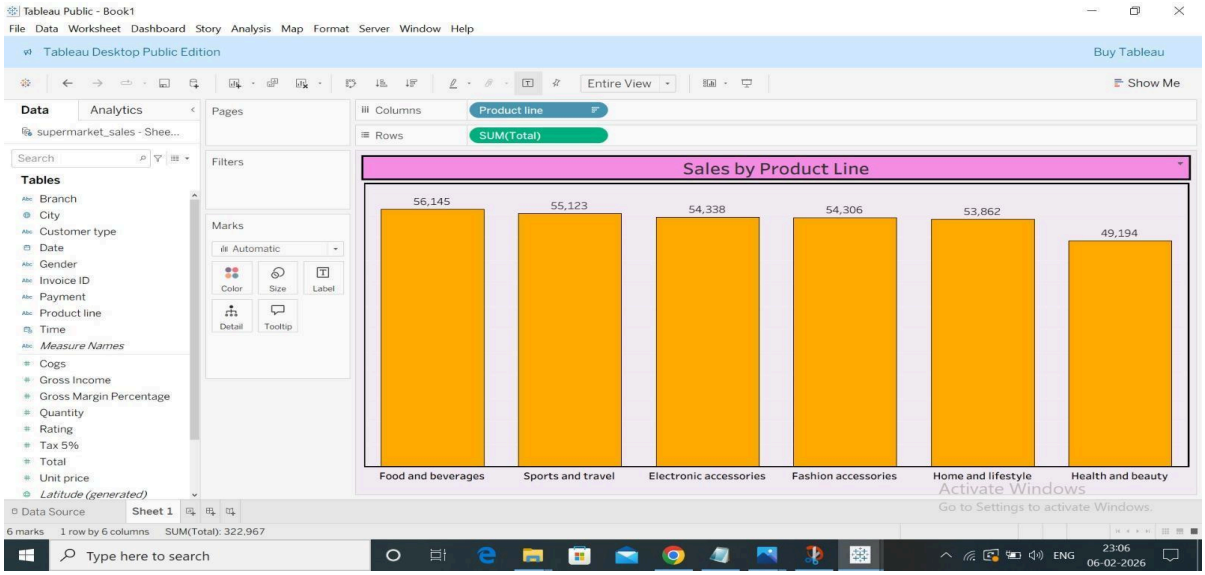
The height (or length) of each bar represents the value of that category.

It helps to clearly and easily compare values between groups (e.g., sales by product category).

STEPS:

- Open a new worksheet in Tableau.
- Drag Product line → Columns shelf.
- Drag SUM(Total) → Rows shelf.
- In the Marks card, keep chart type as Bar (Automatic).
- Drag Product line → Color (optional, for different colors).
- Drag SUM(Total) → Label to display values on the bars.
- Click on the Title and rename it as Sales Performance by Product Category (or Sales by Product Line).
- Select Fit → Entire View and adjust formatting if needed.

FINAL OUTPUT:



PIE CHART

PURPOSE:

A Pie Chart is used to show the proportion or percentage contribution of different categories to a whole.

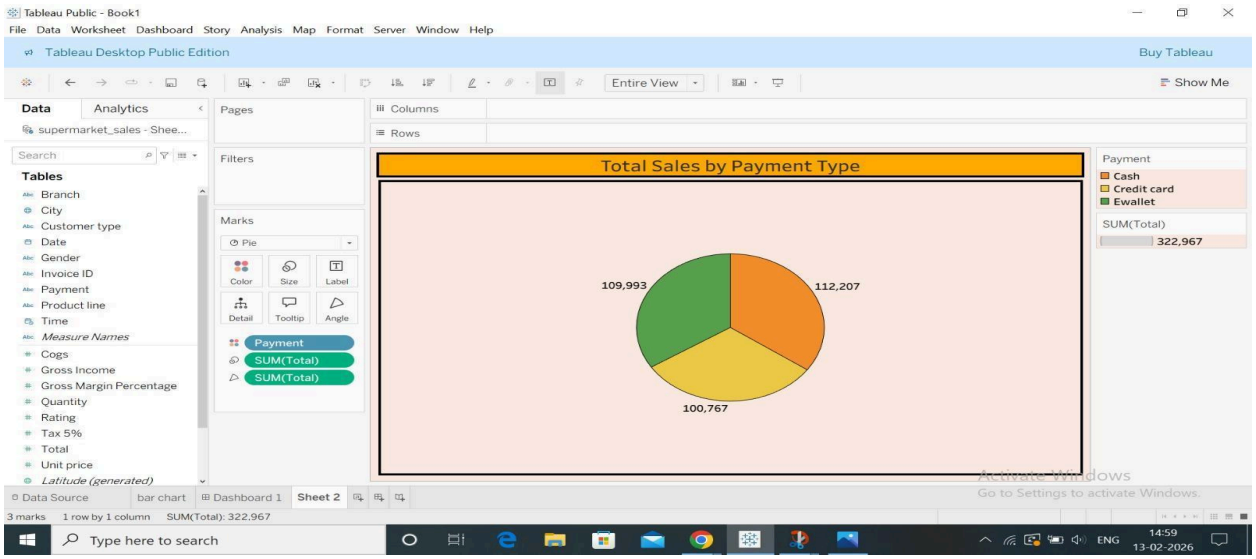
Each slice of the pie represents a category, and the size of the slice shows its share of the total value.

It is mainly used to compare parts of a whole (e.g., sales by payment type).

STEPS:

- Open a new worksheet in Tableau.
- Drag Payment → Marks (Color).
- Change the Marks type to Pie.
- Drag SUM(Total) → Angle (to create slices based on value).
- Drag SUM(Total) → Label (to display values on slices).
- Adjust Size of the pie chart if needed.
- Click on the Title and rename it as Total Sales by Payment Type.
- Select Fit → Entire View and format if required.

FINAL OUTPUT:



STACKED BAR CHART

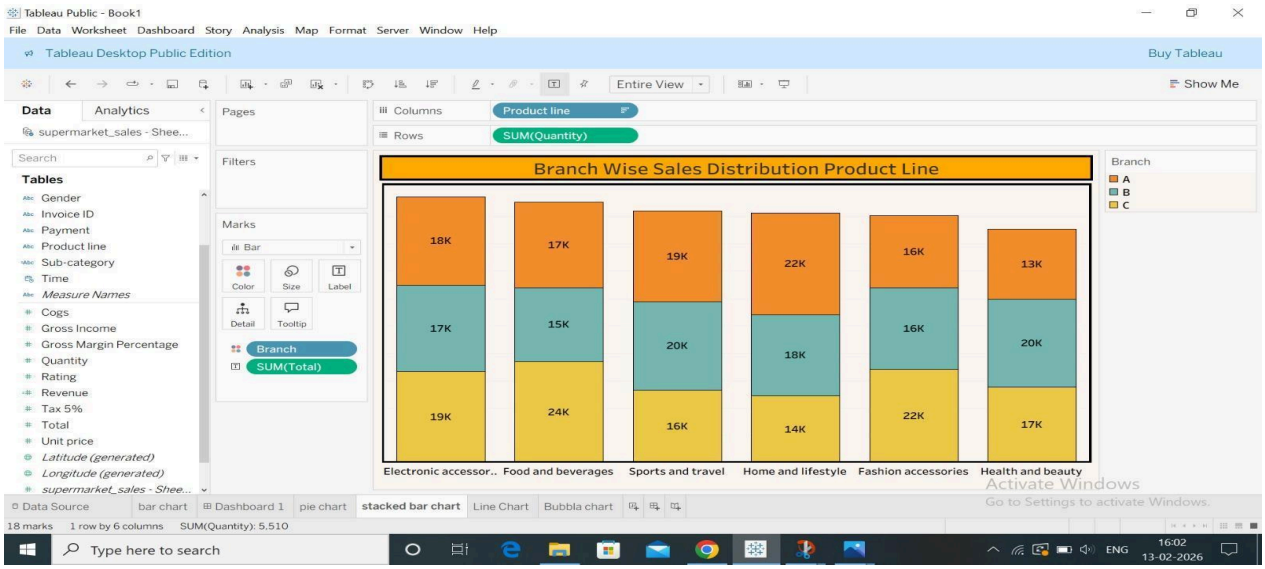
PURPOSE:

A Stacked Bar Chart is used to compare total values across categories while showing the contribution of sub-categories within each bar.

STEPS:

- Open a new worksheet in Tableau.
- Drag Product line → Columns shelf.
- Drag SUM(Quantity) (or SUM(Total)) → Rows shelf.
- In the Marks card, keep chart type as Bar.
- Drag Branch → Color (to create stacked segments).
- Drag SUM(Total) or SUM(Quantity) → Label (to show values on bars).
- Make sure Analysis → Stack Marks → On (if not automatically stacked).
- Click on the Title and rename it as Branch Wise Sales Distribution – Product Line.
- Select Fit → Entire View and adjust formatting if needed.

FINAL OUTPUT:



LINE CHART

PURPOSE:

A Line Chart is used to show trends over time.

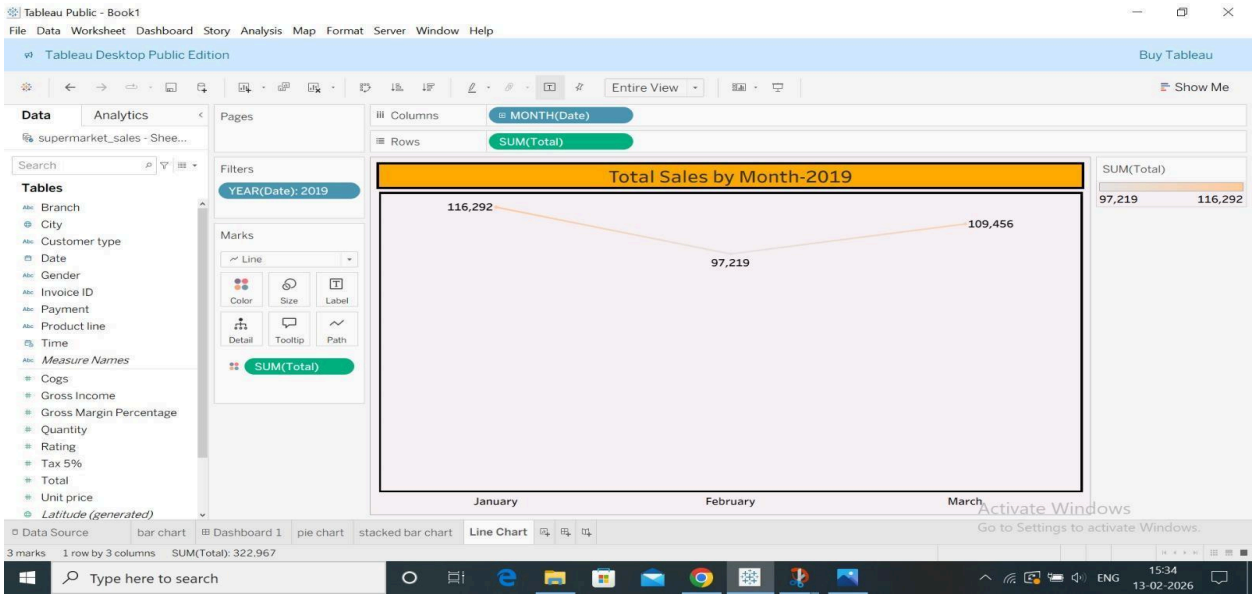
It connects data points with a line to display how values increase or decrease across a period (like months or years).

It is mainly used to analyze sales growth, decline, and patterns over time.

STEPS:

- Open a new worksheet in Tableau.
- Drag Date → Columns shelf.
- Click on Date field and select Month (Continuous or Discrete as needed).
- Drag Total → Rows shelf.
- In the Marks card, change chart type to Line.
- Drag SUM(Total) → Label (to display sales values on the line).
- Drag YEAR(Date) → Filters and select 2019 (if required).
- Click on Title and rename it as Total Sales by Month – 2019.
- Select Fit → Entire View and adjust formatting if needed.

FINAL OUTPUT:



BUBBLE CHART

PPURPOSE:

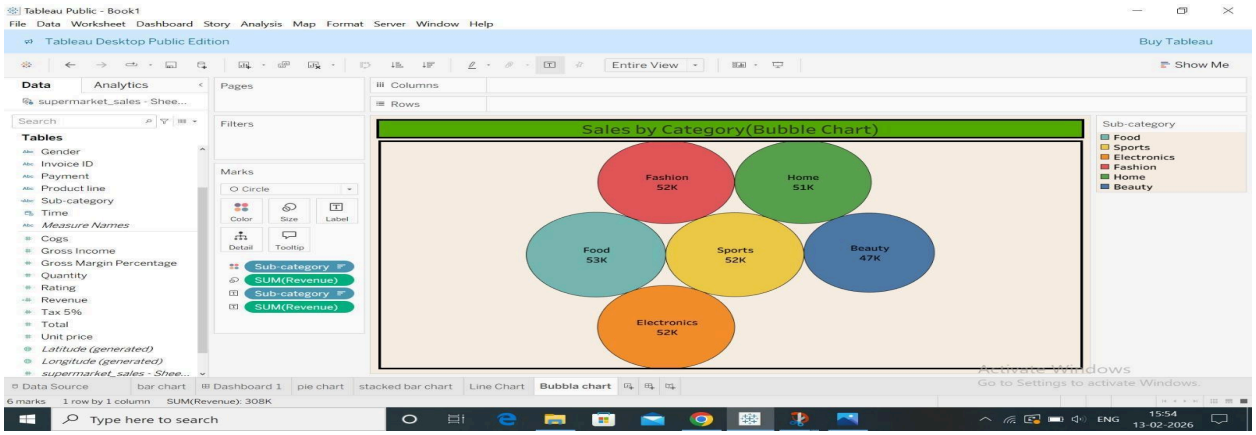
A Bubble Chart is used to compare categories using circles (bubbles).

The size of each bubble represents the value of a measure (like Revenue or Sales).

STEPS:

- Open a new worksheet in Tableau.
- Drag Sub-category → Marks card → Detail.
- Change Marks type to Circle.
- Drag Revenue → Size (to control bubble size).
- Drag Sub-category → Color (to show different colors).
- Drag Sub-category → Label.
- Drag SUM(Revenue) → Label (to display sales value inside bubbles).
- Adjust Size slider to increase bubble size if needed.
- Click on Title and rename it as Sales by Category (Bubble Chart).
- Select Fit → Entire View for better display

FINAL OUTPUT:



ASSIGNMENT-3

DONUT CHART

PPURPOSE:

A Donut Chart is a variation of a Pie Chart used to show the proportion or percentage distribution of categories.

It helps to understand how each shipping type contributes to the total number of orders.

The circular shape makes it easy to compare percentage share visually.

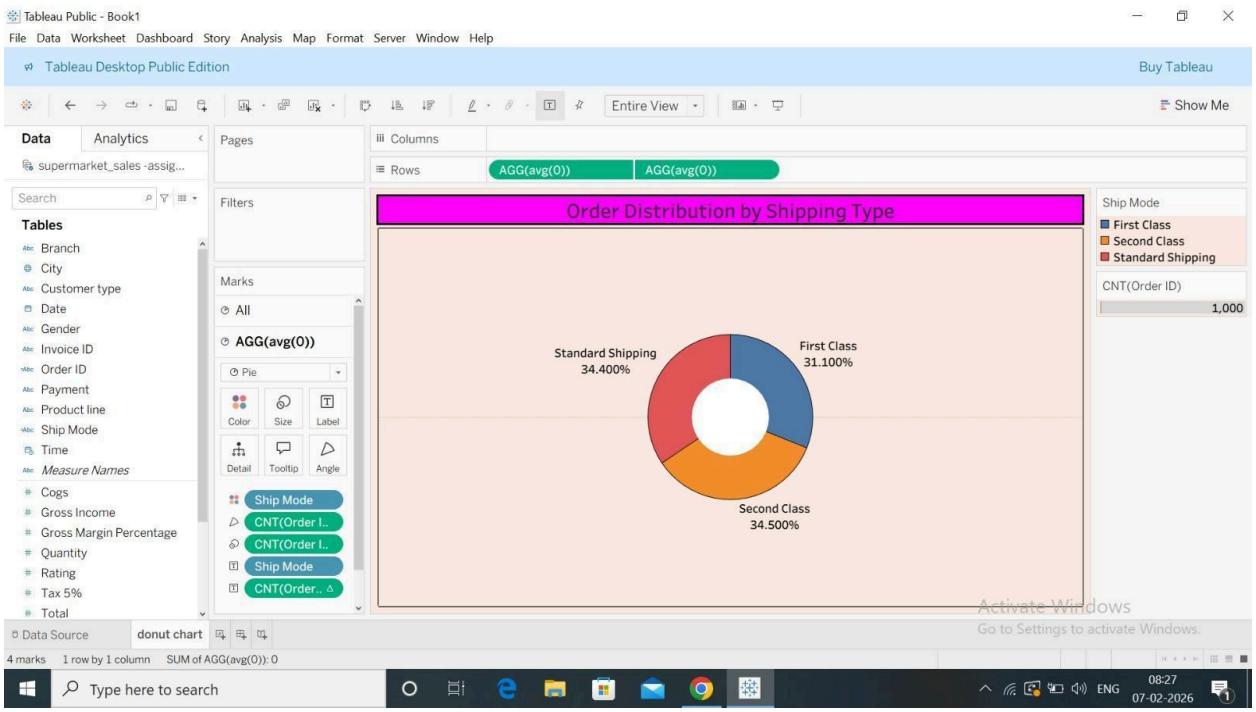
STEPS:

Open a new worksheet in Tableau.

- Drag AVG(0) (or create a calculated field 0) → Columns shelf and duplicate it to create two axes.
- Change Marks type to Pie.
- Drag Ship Mode → Color.
- Drag CNT(Order ID) → Angle.
- Drag CNT(Order ID) → Label (to show percentage).
- Right-click on CNT(Order ID) → Quick Table Calculation → Percent of Total.
- Adjust Size to make the pie bigger.

- On the second Marks card, reduce the size and change color to white to create the donut hole effect.
- Click on Title and rename it as Order Distribution by Shipping Type.
- Select Fit → Entire View and adjust formatting if needed.

FINAL OUTPUT:



AREA CHART

PURPOSE:

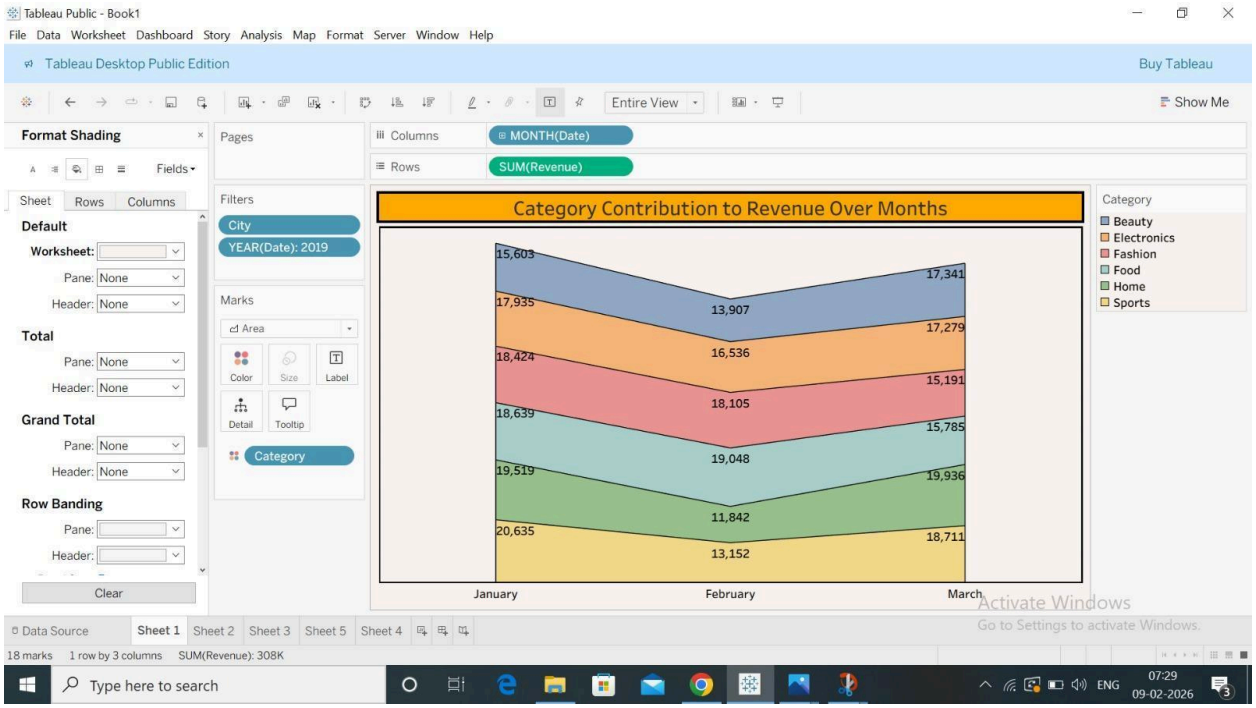
A Donut Chart is a variation of a Pie Chart used to show the proportion or percentage distribution of categories.

It helps to understand how each shipping type contributes to the total number of orders.
The circular shape makes it easy to compare percentage share visually.

STEPS:

- Open a new worksheet in Tableau.
- Drag MONTH(Date) → Columns shelf.
- Drag SUM(Revenue) → Rows shelf.
- In the Marks card, change chart type to Area.
- Drag Category → Color (to create stacked areas).
- Drag SUM(Revenue) → Label (optional, to show values).
- Drag City → Filters (if required).
- Drag YEAR(Date) → Filters and select the required year (e.g., 2019).
- Click on Title and rename it as Category Contribution to Revenue Over Months.
- Select Fit → Entire View and adjust formatting if needed.

FINAL OUTPUT:



TEXT CHART

PURPOSE:

A Text Table (Crosstab) is used to display exact numerical values in a tabular format.

It helps to compare sales across different dimensions such as City, Product Line, and Month.

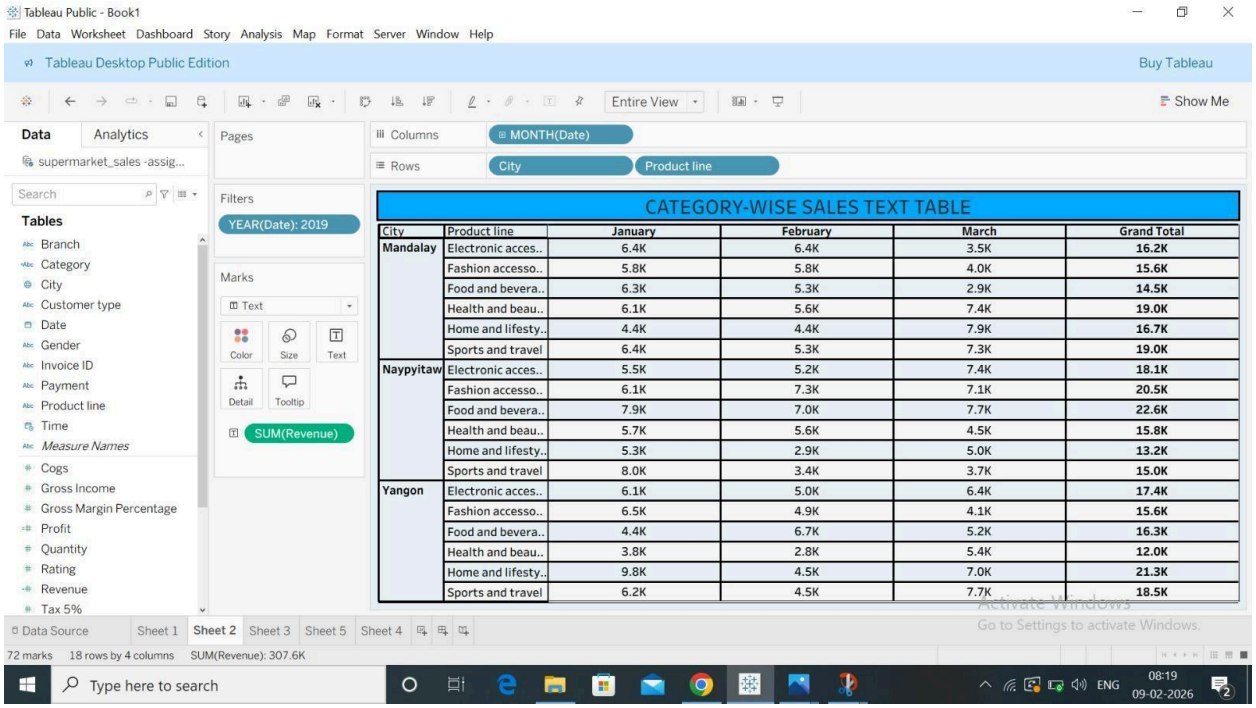
This format is useful when detailed data values are more important than graphical representation.

STEPS:

- Open a new worksheet in Tableau.
- Drag MONTH(Date) → Columns shelf.
- Drag City → Rows shelf.
- Drag Product line → Rows shelf (below City).

- Drag SUM(Revenue) → Text in the Marks card.
- Change Marks type to Text (if not automatic).
- Drag YEAR(Date) → Filters and select required year (e.g., 2019).
- Go to Analysis → Totals → Show Row Grand Totals (to display Grand Total column).
- Format numbers (Right-click SUM(Revenue) → Format → Display Units as K if needed).
- Click on Title and rename it as Category-Wise Sales Text Table.
- Select Fit → Entire View and adjust formatting (borders, shading, alignment).

FINAL OUTPUT:



CATEGORY-WISE SALES TEXT TABLE

City	Product line	January	February	March	Grand Total
Mandalay	Electronic acces..	6.4K	6.4K	3.5K	16.2K
	Fashion accesso..	5.8K	5.8K	4.0K	15.6K
	Food and bevera..	6.3K	5.3K	2.9K	14.5K
	Health and beau..	6.1K	5.6K	7.4K	19.0K
	Home and lifesty..	4.4K	4.4K	7.9K	16.7K
	Sports and travel	6.4K	5.3K	7.3K	19.0K
Naypyitaw	Electronic acces..	5.5K	5.2K	7.4K	18.1K
	Fashion accesso..	6.1K	7.3K	7.1K	20.5K
	Food and bevera..	7.9K	7.0K	7.7K	22.6K
	Health and beau..	5.7K	5.6K	4.5K	15.8K
	Home and lifesty..	5.3K	2.9K	5.0K	13.2K
	Sports and travel	8.0K	3.4K	3.7K	15.0K
Yangon	Electronic acces..	6.1K	5.0K	6.4K	17.4K
	Fashion accesso..	6.5K	4.9K	4.1K	15.6K
	Food and bevera..	4.4K	6.7K	5.2K	16.3K
	Health and beau..	3.8K	2.8K	5.4K	12.0K
	Home and lifesty..	9.8K	4.5K	7.0K	21.3K
	Sports and travel	6.2K	4.5K	7.7K	18.5K

HIGHLIGHTED CHART

PURPOSE:

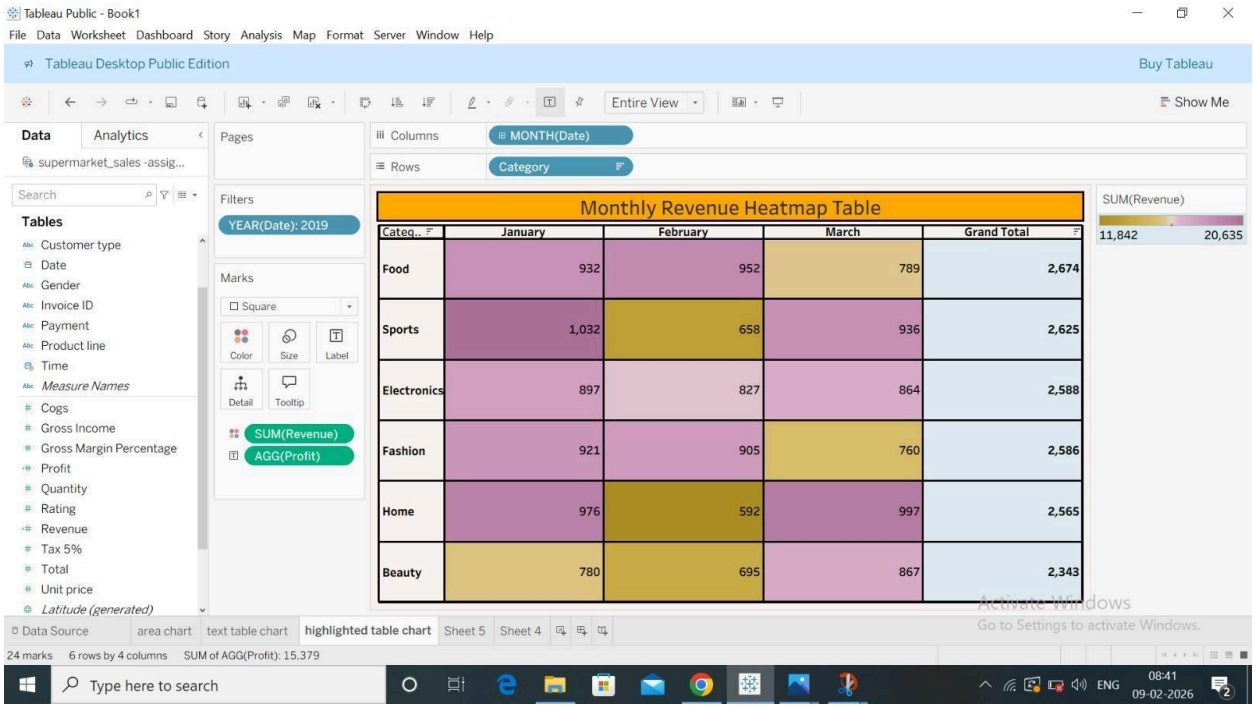
A Heatmap (Highlight Table) is used to display data in a tabular format with colors representing value intensity. Darker or stronger colors indicate higher values, while lighter colors indicate lower values.

It helps to quickly identify patterns, trends, and high/low performance across categories and months.

STEPS:

- Open a new worksheet in Tableau.
- Drag MONTH(Date) → Columns shelf.
- Drag Category → Rows shelf.
- Drag SUM(Revenue) → Color in the Marks card.
- Change Marks type to Square.
- Drag SUM(Revenue) → Label (to display values inside squares).
- Drag YEAR(Date) → Filters and select required year (e.g., 2019).
- Go to Show Me and select Highlight Table (optional shortcut method).
- Adjust color palette from Color → Edit Colors if needed.
- Click on Title and rename it as Monthly Revenue Heatmap Table.
- Select Fit → Entire View and adjust formatting (borders, shading, alignment).

FINAL OUTPUT:



WORDCLOUD

PURPOSE:

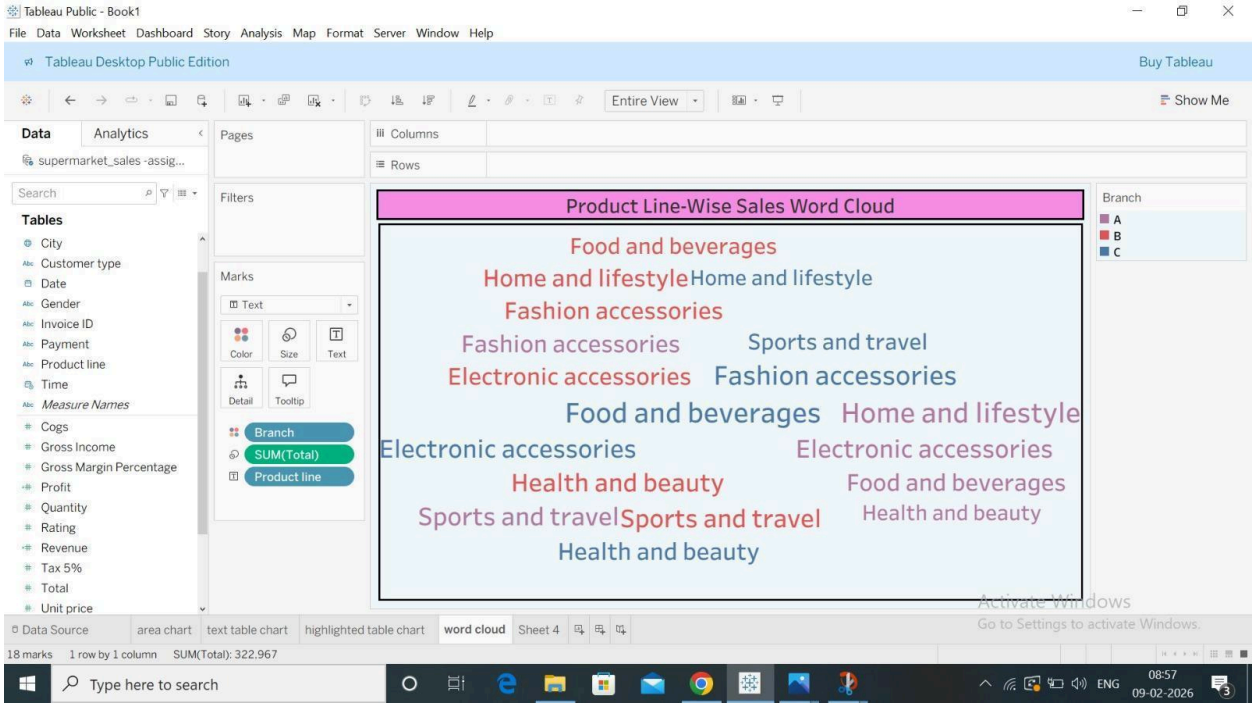
A Word Cloud is used to visually represent text data where the size of each word indicates its importance or value.
In this chart, the word cloud helps to identify which product lines contribute more to total sales

STEPS:

- Open a new worksheet in Tableau.
- Drag Product line to the Marks card → Text.
- Change the Marks type from Automatic to Text.
- Drag SUM(Total) to Size to control word size based on sales.

- Drag Branch to Color (optional, to differentiate branches).
- Drag SUM(Total) to Tooltip (optional, to show sales values).
- Adjust the Size slider to clearly display the words.
- Click on the Title and rename it as “Product Line-Wise Sales Word Cloud”.
- Select Fit → Entire View and adjust formatting if needed.

FINAL OUTPUT:



FUNNEL CHART

PPURPOSE:

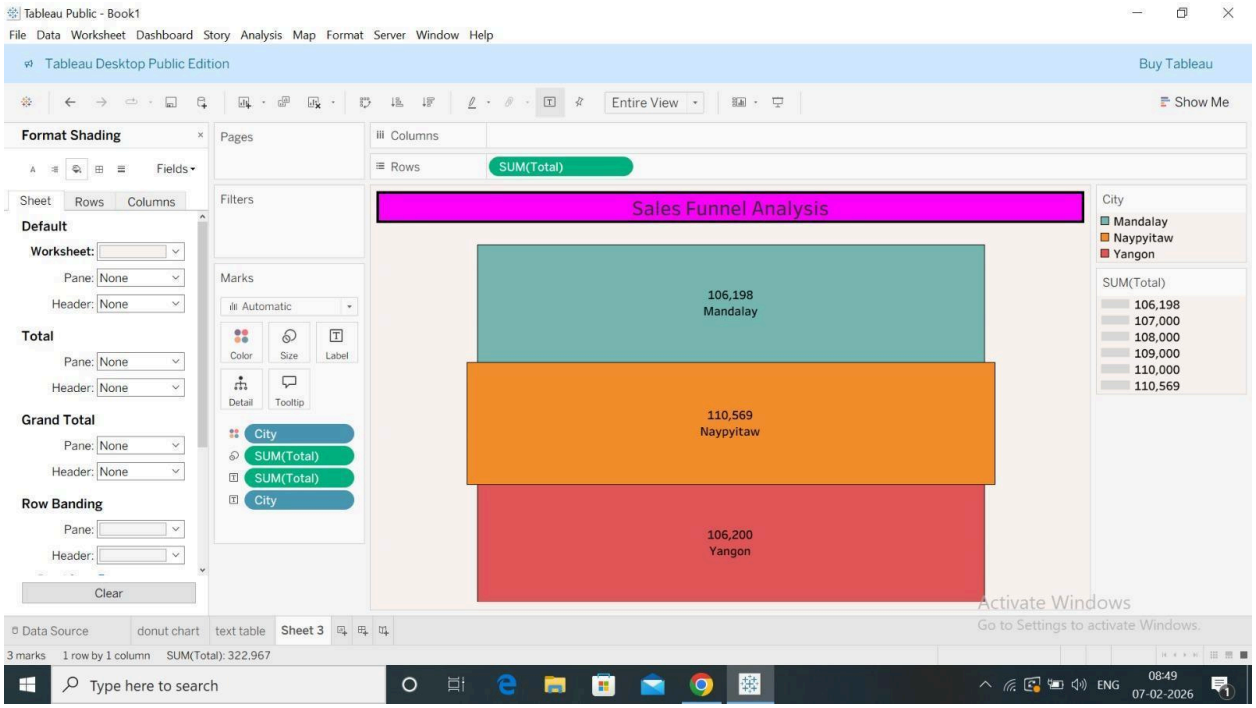
In this analysis, it helps to compare total sales performance across cities, showing which city contributes

more to overall sales. The funnel shape makes it easy to identify the highest and lowest performing cities at a glance.

STEPS:

- Open a new worksheet in Tableau.
- Drag SUM(Total) to the Rows shelf.
- Drag City to the Marks card → Color.
- Drag City to the Label to display city names.
- Drag SUM(Total) to Label to show sales values.
- Change the Marks type to Bar (or Automatic).
- Adjust the Size option to create a funnel-like appearance.
- Sort the cities based on SUM(Total) if required.
- Click on the Title and rename it as “Sales Funnel Analysis”.
- Select Fit → Entire View and adjust formatting if needed

FINAL OUTPUT:

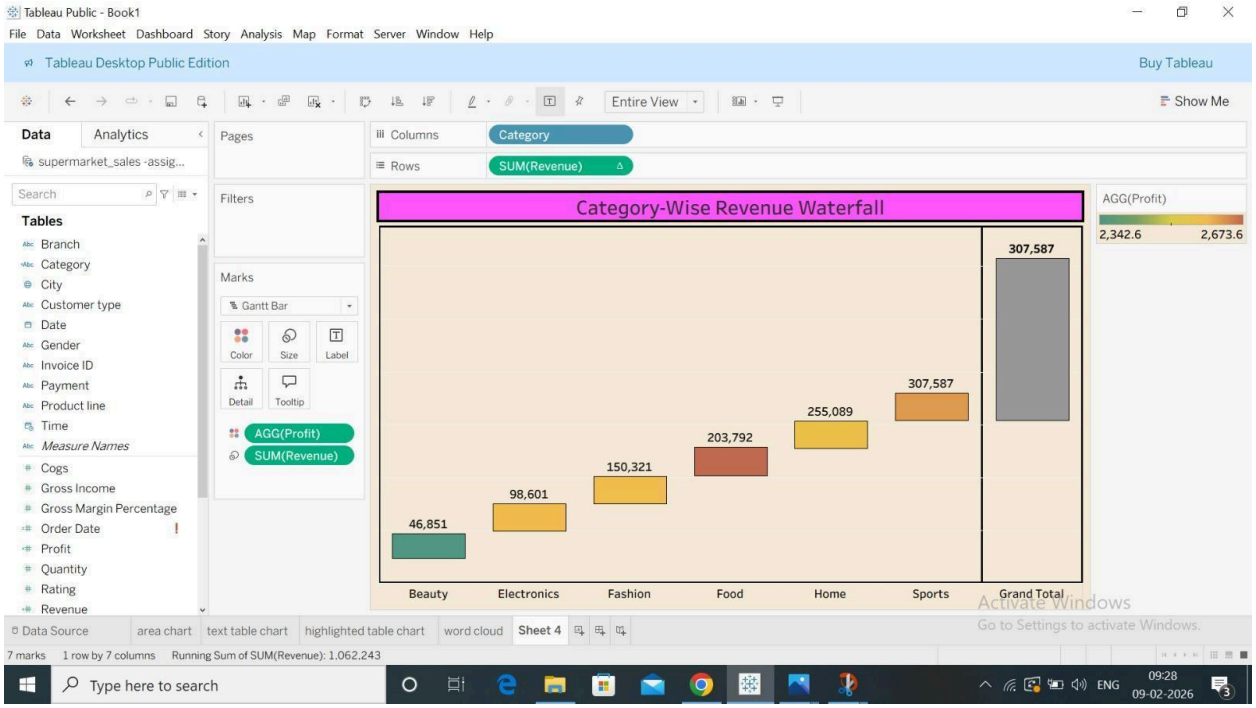


WATERFALL CHART

PPURPOSE:

A Waterfall Chart is used to show the cumulative effect of sequential positive or negative values. It helps in understanding how different categories contribute step-by-step to the final total revenue. This chart clearly displays the running total and highlights the overall impact of each category.

STEPS:

Open a new worksheet in Tableau.
Drag Category to the Columns shelf.
Drag SUM(Revenue) to the Rows shelf.
Change the Marks type to Gantt Bar.
Drag SUM(Revenue) again to the Size option in the Marks card.
Right-click on SUM(Revenue) in Rows → Select Quick Table Calculation → Choose Running Total.
Drag Profit (or desired measure) to Color to differentiate categories.
Click on Label and enable Show Mark Labels to display values.
Format the chart (colors, title, borders) as needed.
Rename the title as Category-Wise Revenue Waterfall.
Select Fit → Entire View for better visualization


FINAL OUTPUT:
